Over-attribution on legitimate members, per class

DEVELOPMENT DATA

Frozen strongest baseline (B2+) under I1; rate of attributable-collusion output on legitimate members; CP95 over independent seed units. No pooling.

● B2+: attributable-collusion output on a legitimate member (T5 / T5b)

◇ CCC v1.2.2 exposure-level 'supported' (L2 harmful exposure, not attribution)

Unit endpoint: any flagged member within a seed unit; k/n = units. RQ4 needs all four classes above 0.5; RQ4b needs P2/P3 above 0.5 and P6/benign at most 0.05. 'ok/no' = class-level criterion met.
