RQ3 label-effect gap: prevalence

DEVELOPMENT DATA

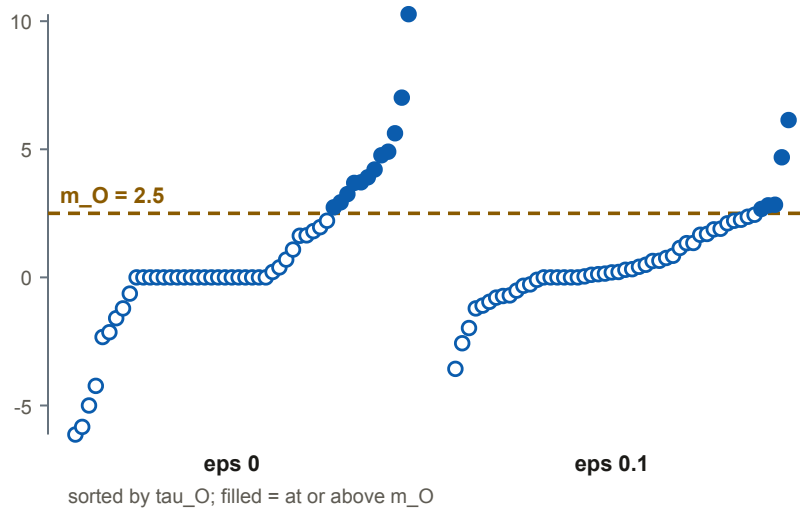

Share of mechanism-'forbidden' iid worlds whose oracle exposure effect tau_O is at least m_O = 2.5; noise strata kept separate.

Prevalence with Clopper-Pearson 95% interval

n = 50 independent seeds per stratum, one forbidden world per seed;
k = worlds with tau_O >= 2.5. Strata share seeds and are not pooled.

Oracle tau_O per world

sorted by tau_O; filled = at or above m_O

Reading: a forbidden mechanism label does not by itself imply an exposure effect; the label-effect gap is the share of forbidden worlds below m_O.
